

STEP 1

Slide one of the white tubes over the pole.

STEP 2

Loop zip tie through the two holes in the white tube and through the bottom grommet of your flag. This is where the bottom of your flag will sit.

STEP 3

Slide one of the clear rings onto the pole. Insert screw in the the clear ring and tighten till it stays. You will need to adjust this after you get the rest of the kit on the pole so don't over tighten it.

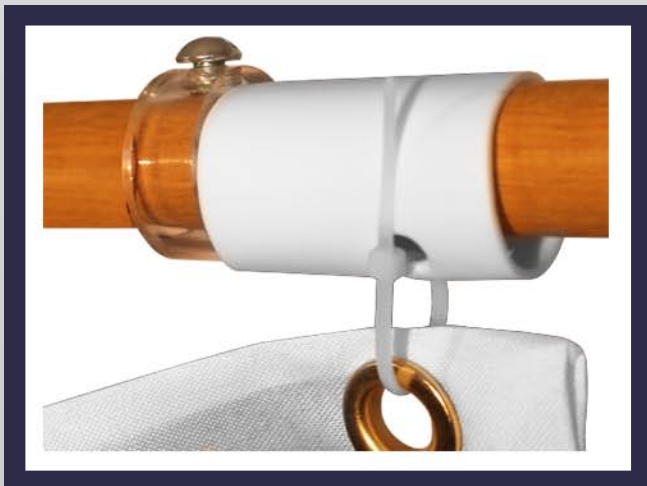

STEP 4

Slide the second clear ring onto the pole, insert screw and tighten till it stays. Once again you still need to adjust it so don't over tighten it.

STEP 5

Slide second white tube above the clear ring. Loop the zip tie through the two holes in the tube and through the top grommet of your flag. This is where the top of your flag will sit.

STEP 6

Adjust so your flag is sitting correctly on the pole. It should not be bunched in the middle or overly stretched. Tighten screws till stable. Over tightening can strip the screw or crack the ring.
